***Improving Mental Healthcare: A Guide to Measurement-Based Quality Improvement***

**Richard C. Hermann, M.D., M.S.**

This is the first book to focus on measuring the basic processes of mental health care, such as access, detection, treatment appropriateness, safety and continuity of care. This book integrates practical information about quality measures—such as their clinical logic, validity and basis in scientific evidence—into a highly readable guide on how to implement measures and use the results to improve quality of care. It examines the clinical, policy and scientific underpinnings of process measurement, a widely used method of assessing quality of mental health care. This book will prove invaluable for health care organizations seeking to improve quality of care, clinical training programs and courses on quality assessment, health care management and mental health policy.

The authors, who are recognized as the world's foremost authorities on clinical work with emotional and developmental challenges in the early years of life, demonstrate how to use their well-established and documented DIR (Developmental, Individual-Differences, Relationship-Based) model to work with the full range of infant and early childhood challenges.
